APPENDIX I	4

1. Introduction

The statistical operation Survey on Time Budgets-EPT provides political managers, economic and social agents, universities, private researchers and citizens in general with detailed and up-to-date information on the economic, cultural and social behaviour of the population of the Basque Country.

The files for the Survey on Time Budgets (EPT1998) constitute a distribution product directed at users with experience in the analysis and treatment of microdata. This format provides an added value to the user, permitting him or her to carry out data exploitation and analysis that, for obvious limitations, cannot be covered by current circulation in the form of tables, publications and reports.

The microdata file corresponding to families-individuals is described in this report. The circulation of the families-individuals file is carried out on the basis of the usefulness and quality of the information that is to be included as well as the interest for the generic user, because it is more beneficial for the person receiving the data to be able to work with them in a combined form.

2. Criteria for selection of variables

This file contains a selection of variables collected in the survey for the selected person and his or her family characteristics. The selection of variables has been carried out based on criteria for both confidentiality and quality, which are detailed below:

2.1 Criteria of confidentiality

This content refers to data that are especially protected by the Personal Data Protection Act and that require express consent from the surveyed individual for them to be given over. In this survey the "health problems" variable was considered as sensitive and it was decided not to disseminate it.

2.2 Criteria of confidentiality

Maintaining the statistical secrecy of the informants is one of the main premises that govern this statistical activity. Therefore, the dissemination of any individual information collected under statistical secrecy must be carried out anonymously and in such a way that it cannot be associated with any specific individual, not even via the content or disaggregation of the disseminated variables.

Therefore, and in order to guarantee this safeguard, the following restrictions have been applied to the ESIF 1998 families file:

- Under no circumstances are variables of direct identification or data of a personal nature (national identity document, name, surname, addresses, telephone numbers, etc.) to be included.
- The maximum geographical dissemination included is national territory together with provincial capitals.
- The age of the person of reference is presented in multiples of ten years.

- The following variables are grouped: family size, civil status, education level, relation to activity, occupation, family nucleus and relationship.
- Numerical variables are not included, except individual weighting.

2.3 Quality criteria

The main limitation in any survey by sample is due to the availability of information solely for the sample units and not for the total objective population. The sampling design of the survey will shed light on the level of representation that we will be able to achieve with the collected information.

In the case of the EPT the sample selection follows, in the 1998 edition, a two-stage design by Province. For the main variables and crosses of the survey the level of representation required is Provincial. However, the large number of variables and the high level of detail that can be achieved with the variables included in this file do not guarantee the statistical significance of all the exploitations or analysis that can be performed on this data.

The conclusions derived from studies or analyses performed on this data are the responsibility of the end user. Nevertheless, to give an idea of the quality of the information for a specific cross or disaggregation it is recommended that you consult the tables of survey sampling errors and the corresponding sampling errors calculation report, which show recommendations regarding acceptable levels of sampling error.

3. Registry design

The families-individuals microdata file of the EPT 1998 has a csv format and it is structured around the thematic areas collected by the survey for this statistical unit.

4. Description of variables

They include the literals corresponding to the codification of each one of the variables included in the file. See Appendix.

APPENDIX 1.

DESCRIPTION OF FILE MICRODATOS_EPT-1998

- 1 Province

PTP_TERR
