

## INDICATORS OF THE 2030 AGENDA FOR SUSTAINABLE DEVELOPMENT. 2021

# Between 2015 and 2020 the percentage of women in business in the Basque Country increased

***Eustat continues to include new indicators to report on progress towards the goals and targets of the 2030 Agenda for Sustainable Development***

Eustat remains committed to continuously expanding and disaggregating the set of statistical indicators that enable the achievement of the 169 targets and 17 Sustainable Development Goals included in the United Nations 2030 Agenda for Sustainable Development in the Basque Country to be quantified.

On this occasion a total of 42 new statistical indicators were included on Eustat's [platform for the dissemination of indicators of the 2030 Agenda for Sustainable Development in the Basque Country](#). The majority of these, a total of 38, were prepared with a methodology fully harmonised with the other Autonomous Regions. The other 4 incorporated indicators were specified for the Basque Country following United Nations guidelines, due to their relevance and interest.

With this new incorporation of indicators, it is possible to provide, at least partial, information on three Sustainable Development Goals for which an indicator has still not been obtained for the Basque Country:

**Goal 6** *Ensure the availability and sustainable management of water and sanitation for all.* Includes 3 statistical indicators.

**Goal 7** *Ensure access to affordable, reliable, sustainable and modern energy for all.* Includes 4 statistical indicators.

**Goal 15** *Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss.* Includes 3 statistical indicators.

Among the indicators included on the Eustat platform that serve to complete United Nations goals, targets and indicators, is that of **Proportion of women in business**. This provides additional insights into the information already offered for the United Nations indicator *Proportion of women in managerial positions*.

## INDICATORS OF THE 2030 AGENDA FOR SUSTAINABLE DEVELOPMENT

**Target 5.5 Ensure women's full and effective participation and equal opportunities for leadership at all levels of decision-making in political, economic and public life**
**Indicator 5.5.2 Proportion of women in managerial positions**

5 GENDER EQUALITY	Proportion of women entrepreneurs			
	2015	2018	2019	2020
<b>Basque Country</b>	<b>33,7</b>	<b>35,4</b>	<b>35,1</b>	<b>34,4</b>
Araba / Álava	36,7	36,0	34,6	30,8
Bizkaia	33,0	35,0	34,9	35,8
Gipuzkoa	33,2	35,7	35,6	33,4

The proportion of women in business in the Basque Country increased by 34.4% in 2020, still a long way from parity. Although lower than in the two previous years, this was a higher percentage than that observed in the reference year 2015, which was 33.7%.

By province the trend was not uniform. Thus, in Álava the proportion of women in business steadily decreased in the period 2015-2020, falling almost six percentage points between 2015 and 2020. In Bizkaia there was an opposite trend, with a rise of almost three percentage points between the year of reference and the last year monitored. In Gipuzkoa, on the other hand, the proportion was similar in 2015 and in 2020, although there was significant decrease in 2020 in respect of 2019, going from 35.6% in 2019 to 33.4% in 2020.

Among the statistical indicators included on the Eustat platform with the aim of providing information on Sustainable Development Goals not quantified to date, is, for example, that of **Renewable energy share in the production of electricity**, covered by the United Nations indicator *Renewable energy share in total final energy consumption*, included in Goal 7.

**Target 7.2 By 2030, increase substantially the share of renewable energy in the global energy mix**
**Indicator 7.2.1 Renewable energy share in the total final energy consumption**

7 AFFORDABLE AND CLEAN ENERGY	Renewable energy share in electricity production			
	2015	2018	2019	2020
<b>Basque Country</b>	<b>18,08</b>	<b>23,39</b>	<b>13,43</b>	<b>19,81</b>

We can see that, although there was a significant decrease in 2019, the renewable energy share in the production of electricity showed a positive trend between 2015 and 2020. In effect, the renewable energy share went from accounting for 18.08% of the total in 2015 to representing 19.81% in 2020.

Another Sustainable Development Goal on which information is provided for the first time with this inclusion of statistical indicators on the Eustat dissemination platform is Goal 15. Three statistical indicators are included in this Goal, among them the **Proportion of forest area with sustainable management instruments in place**, included in the United Nations Indicator *Progress towards sustainable forest management*.

## INDICATORS OF THE 2030 AGENDA FOR SUSTAINABLE DEVELOPMENT

**Target 15.2 By 2020, promote the implementation of sustainable management of all types of forests, halt deforestation, restore degraded forests and substantially increase afforestation and reforestation globally**

**Indicator 15.2.1 Progress towards sustainable forest management**

15 LIFE ON LAND	Proportion of forest area with sustainable management instruments			
	2015	2017	2018	2019
Basque Country	15,90	18,54	18,90	19,34

This statistical indicator shows a sustained positive evolution in the period 2015-2019, rising from 15.90% of forest area with sustainable management instruments in place in 2015 to 19.34% in 2019.

**Note.** Work continues on including new indicators on the [platform for the dissemination of indicators of the 2030 Agenda for Sustainable Development in the Basque Country](#), in order to offer both disaggregated statistical indicators already published and to include new ones that provide information on contents targets not covered to date.
