Source: Eustat. Death statistics

The main causes of death were tumours and circulatory system diseases, which caused the deaths of 1,621 and 1,594 individuals respectively, which means that together they accounted for 51.8% of deaths. Diseases of the respiratory system were the third cause of death resulting in 543 deaths (8.7%). Diseases of the nervous system were the fourth cause of death with 404 deaths (6.5%). Diseases of the digestive system caused 303 deaths (4.9%).

The cause of death continued to vary according to sex. Among men, tumours caused more deaths than diseases of the circulatory system, whilst among women the main cause of death was diseases of the circulatory system, followed by tumours in second place.
