### **The average age of the people who died was 81.5 years old**

Considering the total number of deaths in 2023, there were 11,277 female deaths and 11,034 male deaths. The average age of people who died in 2023 was 81.5 years of age, whereas ten years previously in 2013, the figure stood at 78.8, meaning that it has risen by 2.7 years over the course of the last decade.

The average age at death amongst men in 2023 was 78.3, whilst the average age amongst women stood at 84.7. In 2013, the average ages were 75.5 and 82.4, respectively. Thus, over the course of the last 10 years, the average age at death of men has increased by 2.8 years, and that of women by 2.3 years.

As regards child mortality, there were 35 deaths of children under one year of age in the Basque Country. Mortality amongst newborns, occurring within the first 28 days of life, registered 24 deaths, 3 of which were during the first 24 hours and another 16 in the first week. Within deaths amongst children below the age of 1, boys accounted for 51.4% of the total.

In 2023, 552 people died at the age of 100 or over (born in 1923 or before), of which 83.5% were women. The number of deaths amongst centenarians increased by 31 in relation to 2022.

### 28% of deaths were due to tumours

28% of deaths that occurred in 2023 (6,248 deaths) were due to tumours, followed by circulatory system diseases, at 25.4% (5,659 deaths), and lastly, mental and behavioural disorders, at 8.5% (1,903).

The cause of death continued to vary according to sex: amongst men, tumours caused more deaths than diseases of the circulatory system, whilst amongst women, the main cause of death was cardiovascular disease, followed by tumours. It is also worth noting that there was a higher percentage of women among deaths caused by mental and behavioural disorders, in contrast to that which occurred with those attributable to external causes, where there was a higher percentage of men.

Furthermore, the cause of death varied in accordance with age. Amongst those aged under one, the most frequent causes of death were illnesses originating in the perinatal

period and congenital malformations; amongst those aged from 1 to 39, the majority of deaths were attributable to external causes, including accidents and suicides; amongst those aged between 40 and 79, tumours were the highest cause of death, whilst amongst those aged 80 years or over, it was diseases of the circulatory system.

### The COVID-19 virus was the cause of 1.6% of deaths

In 2023 there were a total 358 deaths where COVID-19 was the main cause (all confirmed by a specific analysis), 1.6% of the total. Deaths resulting from this cause were down 79.2% on those recorded in 2022.

By province, Bizkaia had the highest number of deaths due to COVID-19 (228), followed by Gipuzkoa (91) and Álava (39). Considering these deaths in terms of percentages, in Bizkaia the percentage of deaths caused by COVID-19 amounted to 1.9% of the total, in Gipuzkoa, 1.2% and in Álava, 1.3%. As regards the capitals, Bilbao stood out with 78 deaths caused by COVID-19 (2%), followed by San Sebastián with 27 (1.3%) and Vitoria-Gasteiz with 23 (1.1%). Numbers were also notable in Barakaldo and Getxo, with 20 (1.9%) and 13 (1.7%) deaths resulting from this cause, respectively.

The number of women who died due to COVID-19 was higher than that of men: 182 women compared to 176 men. In terms of age, 77.1% of deaths caused by COVID-19 corresponded to people over 80 years old.
